Profile

Full-Stack Developer | DevOps-Enabled with 1.5 years shipping and deploying production web applications across healthcare, manufacturing, and government sectors — owning the complete lifecycle from development through infrastructure and deployment. Strong in React.js on the frontend, with backend experience across Node.js, Express, and Supabase/Postgres. Hands-on with Docker containerization, CI/CD automation, DNS/domain configuration, and cloud deployment (Vercel, Cloudflare Pages, AWS fundamentals). Own projects end-to-end — from client acquisition and requirements, through architecture and development, to deployment, production support, and infrastructure management. Drive a heavily AI-augmented workflow with Claude Code and Cursor — using agentic, spec-first development to ship features faster and with fewer regressions. Also built DevBoard, a GitHub-integrated developer analytics dashboard with OAuth, live API ingestion, and row-level multi-tenancy.

Professional Experience

01/2026 – Present
Pune, India

Freelance Full-Stack Developer

Self-employed (sumitbuilds.in)

Tech Stack: React.js, Tailwind, CSS, Cloudflare Pages, Vercel, Resend API, Zoho Mail, Supabase, JavaScript

DevOps/Infra: Docker, CI/CD (GitHub Actions), Linux, Git, AWS (EC2, S3, IAM basics), Networking (DNS, Load Balancing)

- **Developed projects end-to-end — from client acquisition and requirements gathering, through architecture and development, to deployment and production support** — owning every stage independently across 5+ production applications, with no PM, QA, or DevOps layer above me.
- Managed DNS/domain setup, Vercel and Cloudflare Pages deployment pipelines, and production support independently for each client
- Built RMRP Global Trade (rmrpglobaltrade.com) — a B2B export site with full Cloudflare Pages deployment, custom domain DNS, Zoho Mail MX records setup, and Resend API contact-form integration
- Contributed to WDRC, a React Native healthcare appointment-booking app published on **Google Play Store and Apple App Store** — involved in UI screens and API integration using an AI-assisted workflow
- Set up custom transactional email infrastructure (Zoho Mail + Resend API) for client business communication needs
- Live projects: rmrpglobaltrade.com · drnitinsapat.in · winnerweldingg.in · Gram Panchayat Site
- Adopted an AI-augmented, spec-first workflow (Claude Code + Cursor) — writing tight specs and reviewing AI-generated diffs — to deliver features in shorter cycles while keeping code reviewable and test-backed

12/2024 – 01/2026
Pune, India

Software Developer (Contract)

CypherMatrix Technologies Pvt. Ltd.

Tech Stack: React.js, JavaScript, Node.js, Express, Tailwind CSS, MUI, Redux, Jest, Zod

- Built a **multi-tenant website system** for healthcare clinics on React.js — per-clinic branding, dynamic content rendering, and a shared template architecture serving every deployed clinic from a single codebase.
- Designed and shipped a **reusable component library** adopted across all clinic templates — standardising design patterns and eliminating duplicate UI work on each new clinic onboarding.
- Integrated **REST APIs** for dynamic data rendering, collaborating with backend engineers on end-to-end feature delivery.
- Contributed to a **Turborepo + pnpm monorepo** — managing shared packages, configs, and cross-app dependencies across multiple applications.

- Implemented test coverage with **Jest** and runtime validation with **Zod**; owned debugging, deployment, and production support across the release cycle.

Project

DevBoard — Gamified Developer Productivity Dashboard

Tech Stack: React.js, Supabase (Postgres + RLS), Tailwind CSS, GitHub OAuth / REST API

- GitHub-integrated productivity tool: authenticates via GitHub OAuth and pulls live commit, PR, and repo activity for each user
- XP engine: designed a scoring system with streak multipliers that rewards consistent contribution activity and visualises progress over time
- Commit heatmap: built a GitHub-style contribution heatmap from real commit history, with per-day and per-repo drill-down
- Supabase backend with Row-Level Security (RLS) policies to keep each user's data isolated and secure
- Debugged and resolved GitHub API rate-limiting issues and commit-author mismatch edge cases in production
- Rescoped from a personal tracker into a team productivity tool with an admin dashboard for tracking team-wide activity
- Used as primary portfolio project to demonstrate independent, end-to-end product thinking beyond client work

Education

07/2020 – 05/2024 Pune, India	Bachelor of Engineering in Information Technology, Pune Jayawantrao Sawant College Of Engineering	7.78 CGPA
07/2018 – 06/2020 Ahmednagar, India	Higher Secondary Education (HSC) Shri Ravishankar Vidyamandir Karjat, Ahmednagar	81.23%
06/2013 – 03/2018 Ahmednagar, India	Secondary School Certificate (SSC) Shri Ravishankar Vidyamandir Karjat, Ahmednagar	88.60%

Skills

Languages

JavaScript, C, C++, Python, Java

Backend

Node.js, Express, REST, JWT/Auth

Devops & Tools

Turborepo, pnpm, GCP, Vercel, Git/GitHub, Jest, Claude Code, Cursor, Figma

Core Concepts

Data Structures & Algorithms, DBMS, OOP, Problem Solving

Frameworks & Libraries

React, Redux Toolkit, Tailwind CSS, shadcn/ui

Databases

PostgreSQL, MongoDB, MySQL, Supabase

CMS & Platforms

WordPress, Shopify, Framer, Webflow

DevOps & Cloud: Docker, CI/CD (GitHub Actions), AWS (EC2, S3, IAM), Linux, Git, Networking (DNS, Load Balancing), Kubernetes & Jenkins
